DETAILED ACTION

1. Applicants amendment filed 9/13/04 has been received and considered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rudd '676 in view of Murphy.

Rudd '676 discloses a torque controller 34 which comprises an input, for receiving a command torque, as broadly claimed, an input for receiving a signal indicative of a measured amount of brake torque applied to the wheel and an output for providing a brake pressure output command to a brake actuator. Please see the discussion in columns 4-7 and note equation 6.

Rudd however lacks a specific discussion of adjusting the brake pressure output command P_c to provide improved brake response during normal braking.

The reference to Murphy discloses a torque feedback controller, which has inputs for receiving command and measured brake torques, and that allows torque compensation operation until the wheel speed reaches zero that avoids discontinuities in braking regardless of time or torque level. Please refer to col. 6 of Murphy. This reference is similar to the prior art discussed on page 1 of applicants specification.

Art Unit: 3683

One having ordinary skill in the art at the time of the invention would have found it obvious to have modified the reference to Rudd to incorporate the teachings of Murphy to offer smoother brake system and to avoid the discontinuities in braking (such as grabby brakes) discussed by Murphy.

The limitations of claims 2-20 are either suggested by the combined teachings of Rudd and Murphy or are notoriously well known in the art. For instance, although not applied, note the look up tables suggested by Littlejohn or Amberg et al. '113.

Response to Arguments

4. Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Applicant's should carefully review the prior art of record for it's collective teachings. Note both Littlejohn and Phipps address brake pressure adjustment during normal and ABS braking. Note also that the "command" signals can be referred to as "pressure", "torque" or "force".
